

Boost Your Facilities EAM Experience with TransTrack

Introducing TransTrack Manager®, a web-based transit business analytics and data management system to efficiently aggregate data from multiple sources for enhanced performance monitoring and reporting.

Our TransTrack Manager® Facilities EAM Module:

Maintains the functionality of your equipment and facilities tracking. With better tracking, your agency lowers the chance of equipment failure, downtime and the costs associated. This tool will help eliminate time-consuming and costly manual tracking processes.

16
Primary KPIs

100s
of Measurable Metrics

271
Canned Reports

We believe that knowledge is power, which is why our software gives you full transparency to every metric you need to get the most out of your EAM needs.

The EAM facilities market is changing.

With today's evolving technology and focus on organization efficiency and data aggregation, it's no wonder that many agencies are moving away from antiquated systems. Our cloud-based solution will allow you to manage your facilities with ease.

REQUEST A DEMO

The TransTrack Manager® Facilities Enterprise Asset Management (EAM) Module Tracks:

Work Orders

Flexible entry option for any work order type with an explanation of the problem, repair, maintenance scheduling, labor time and parts.

Inventory Management

With TransTrack EAM Facilities our Inventory Tool gives you the capability to fine-tune your forecasting, identify low stock, and use a FIFO or LIFO method.

Track Units

The Unit function is a subset of the Site and Unit Group which will show the Location, Manufacturers information, Warranty info, Asset Management, Standard Task, Events and Condition Assessment all on one screen.

Receiving

TransTrack EAM Facilities Receiving Module lets the company either receive the whole order or partial order and puts it into the company's inventory.

Purchase Orders

TransTrack EAM Facilities allows the company to create purchase orders to send to the vendor and outline exactly what the order should contain.

Maintenance Cycles

Scheduling maintenance cycles is easier than ever with our upgraded Facilities EAM solution. Ensuring that each asset remains in good working order.

Work Request

Allow anyone you choose in the company that has access to the system to write up a pre-work order that is used to alert the Maintenance Manager about issues that may require their attention. The Maintenance Manager can then determine if a Work Order is needed or the disposition of the Work Request.
